

HERO

GlobalView

Finally, a line monitoring system that shows not only **WHERE** your problems are, but also **WHY** they occur.

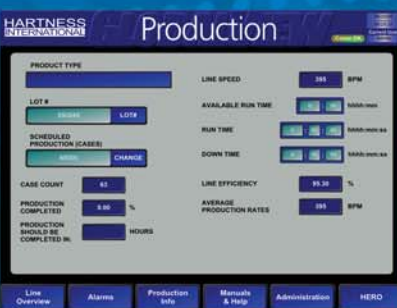

HERO GlobalView is an integrated data solution that centralizes information from your line in a single system. Production data provides excellent insight into line performance. The highly visual format lets you know which machines are down with a single glance. Troublesome areas are highlighted and then diagnosed using HERO video. Searchable electronic manuals and schematics are available at the touch of a button.

The GlobalView difference is an unrelenting focus on the information you need to improve efficiencies in your plant. Like other line monitoring or SCADA systems, GlobalView provides quality information about line performance. Unlike other systems, GlobalView is designed to display this information in an easy-to-interpret format and is accompanied by HERO video for the ultimate troubleshooting experience.

BENEFITS

- ▶ Dramatically improves efficiencies by improving root-cause analysis
- ▶ Pinpoints line problems faster
- ▶ Provides single source for all troubleshooting information
- ▶ Ensures real-time insight into line performance
- ▶ Video validates interpretation of alarms
- ▶ Machine status icons dispatch operators to trouble areas

OEMs and system integrators have long benefited from the use of Supervisory Control and Data Acquisition (SCADA) technology to help them efficiently monitor and control plant equipment and manufacturing processes.

Since their first use in the 1960s, such systems have provided information about production events, but without the added benefit of pictures or video. With HERO GlobalView, operators and integrators are no longer working blind.

While data acquisition systems gather information and transfer it to a central monitoring facility, HERO GlobalView is recording and sending back real-time video of those same events.

Operators now have both data and images at their fingertips. As such, solutions are found sooner and production moves forward.

FEATURES

- ▶ View HERO video and process data on one integrated screen
- ▶ Transition seamlessly between video and data alarm screens allowing for comprehensive, real-time diagnostics
- ▶ Record video of intermittent errors in hard-to-observe locations
- ▶ Fully scalable to meet your requirements, large or small
- ▶ Flexible PLC connectivity options and advanced triggering capabilities
- ▶ View live alarm video and recorded events via the Internet

TECHNICAL SPECIFICATIONS

- Unlimited screen creation
- Many options for data storage and event logging
- Wide array of PLC and device communication
- Multi-level password protection
- Affordable hardware and software expansion
- Up to 16 cameras viewable at each location
- User-defined report generation add-ons
- Multi-language capability
- Computer requirements include minimum RAM, hard drive, and processor capabilities
